It currently consists of 8 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
Research, 320 Charles Street, Cambridge, MA 02141, USA On Mar 30, 2000 this sequence version replaced gi:6573937. All repeats were identified using RepeatMasker: Smit, A.F.A. & Green, P. (1996-1997) http://ftp.genome.washington.edu/RM/RepeatMasker.html

It currently consists of 15 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                              APU01997 180446 bp DNA linear HTG 30-MAY-2000

                                                                                                                                                                                                                                                                                  Sequence updated (25ch May-2000).

* NOTE: This is a 'working draft' sequence. It currently consists of 15 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              152428 152427: gap of 100 bp 152428 159944: contig of 7417 bp in length 159945 159944: gap of 100 bp 159945 159944: gap of 100 bp 159945 165719: contig of 5774 bp in length 165719 165819 172001: contig of 6183 bp in length 172002 172101: gap of 100 bp 172002 175943: contig of 3842 bp in length 175944 176043: gap of 100 bp 175944 176043: gap of 100 bp 175944 176043: gap of 100 bp in length 175944 176043: gap of 100 bp in length 175944 176044 179290: contig of 3842 bp in length 175944 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 175044 1750

NOTE: This is a 'working draft' sequence. It currently consists of 67 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                   Submitted (15-SEP-2001) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, 7x 77030, USA on Dec 20, 2001 this sequence version replaced gi:15624160.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     During sequence version replaced gi:13396434.

On Apr 14, 2001 this sequence version replaced gi:13396434.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality)=30; an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em; EMBL; Sw; SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 9, constructed by the Sanger Centre Chromosome 9 Mapping Group. Puther information can be found at http://www.sanger.ac.uk/HGP/Chr9

RPI1-56D6 is from the library RCI-11.1 constructed by the group of Pieter de Jong. For further details see
                                                                                                                                                                                                                  ö

It currently consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

NOTE: This is a "working draft" sequence It currently consists of 51 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                    Submitted (13-SEP-2001) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

                                                               /note-"Organ: liver; vector: pwE185-FL3; Site_l: DraIII
/note-"Organ: liver; vector: pwE185-FL3; Site_l: DraIII
(CACCTGTGTC); Site_2: DraIII (CACCATGTC); lst strand cDNA
was primed with an oligo(dT) primer stranded cDNA was
[ATGTGGCCTTTTTTTTTTTTTTT]; double-stranded cDNA was
ligated to a DraIII adaptor [TGTTGGCTACTGC], digested
and cloned into distinct DraIII sites of the pwE188-FL3
vector (5' site CACTGTGTG, 3' site CACCATGTC). XnoI should
be used to isolate the cDNA insert. Size selection was
performed to exclude fragments <-1.5kb. Library
constructed by Dr. Sumio Sugano (University of Tokyo
Institute of Medical Science). Custom primers for
sequencing: 5' end primer CTTCTGCTCTAAAAGCTGCG and 3' end
primer CGACCTGAAGCACA.

Embryos were cut from mature, dormant seeds and imbibed in
25 mcrow ABA (abscisic acid) in 5 mM Mes buffer, pH 5.7,
for 12 hr at 22 C. The tissue, total RNA, and poly(A)
/note="Vector: Lambda Uni-ZAP XR, excised phagemid pbluescript SK; Site_1: ECORI: Site_2: XhoI; Seeds were surface-sterilized, germinated and grown aseptically in the dark at room temperature on filter paper with water, nystatin and cefotaxime in covered crystallization dishes. Roots were harvested. The tissue, total RNA, and poly(A) RNA were prepared, a cDNA library was made in the TJ Close lab (Choi, Close, Fenton) at the University of California, Riverside. The CDNA clones were in vivo excised to give pbluescript phagemids before normalization was carried out. The mass excision of phagemid library and normalization were done in HT Nguyen lab by D. Zhang at Texas Tech Univeristy. Normalization protocol used was that of Soares. Plasmid DNA Anderson lab (all other authors)."

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 207,

Submitted (14-DEC-2000) Sanger Centre, Hinxton, Cambridgeshire,
CB10 18A, UW. E-mail enquiries: humquery@sanger.ac.uk Clone
requests: clonerequest@sanger.ac.uk
On Dec 17, 2000 this sequence version replaced gi:11863543.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not, be found in the sequence submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AP002438 Homo sapi

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         repeat_region
corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated repeat sequence elements. Where the sequence is annotated repeat sequence elements. Where the sequence is ambiguous, there is an annotation using the 'unsure' feature key. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em: EMBL; Sw.; SWISSPROT; Tr.; TREMBL; WP: WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping http://www.sanger.ac.uk/HGP/ChI Sanger Centre Chromosome 1 Mapping http://www.sanger.ac.uk/HGP/ChI Sanger Centre Chromosome 1 Mapping http://www.sanger.ac.uk/HGP/ChI Sconstructed by the group of http://www.chori.org/bacpac/home.htm

VECTOR: porpac2

IMPORTANT: This sequence is not the entire insert of clone http://www.chori.org/bacpac/home.htm

VECTOR: porpac2

IMPORTANT: This sequence is not the entire insert of clone spections only once, except for a 100 base overlap.

The true left end of clone RP4-800F24 is at 1 in this sequence. The receipt and contains it at 125401 in this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      6388. .6637

NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a "working draft" sequence. It currently consists of 42 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Sequencing vector: plasmid: LO8752; 100% of reads Chemistry: Dye-terminator Hig Dye: 100% of reads consensus quality: 14952 bases at least Q40 Consensus quality: 152642 bases at least Q30 Consensus quality: 154560 bases at least Q20 Insert size: 156095; sum-of-contigs Insert size: 156095; sum-of-contigs Quality coverage: 4.04x in Q20 bases; sum-of-contigs Quality coverage: 4.03x in Q20 bases; sum-of-contigs Quality
                                                                                                                                                                                                                 * NOTE: This is a 'working draft' sequence. It currently a consists of 11 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             112197 112296: cont.19 of 12979 bp in length 112197 112296: gap of 100 bp 112297 116984 112083: cont.19 of 4687 bp in length 116984 121083: gap of 100 bp 117083: gap of 100 bp 121152 121251: gap of 100 bp 121252 134800: cont.19 of 13549 bp in length 134901 134500: cont.19 of 13791 bp in length 134901 152651: cont.19 of 17751 bp in length 15252 157515: gap of 100 bp 152551: gap of 100 bp 152551

NOTE: This is a "working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as arbitrary. Gaps between the contigs are represented as This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
